Marked by the revolts and rebellions of the March Revolution, the German petty states are on the brink of economic collapse. However, with the appearance of the first private trains, cross-border connections are increasingly growing, linking the larger cities and creating industrial centers that will lift the troubled country. Maybe it's because the devs are German, but this DLC seems to take all the fair criticisms of the past releases to heart and improves as a result. The patchwork of Germany in this time period is really nicely realized by way of purchasing rights to build in each historic territory or polity. The German-themed characters we've come to know is a nice touch, too.

The new resources and the HUGE map are great. My only complaint is free mode is a little borked on some settings because your tasks sometimes relate to territories opposite to where you chose to start. But, it's free mode, so the goal is to have fun and tasks are all optional. Pairing this with new features for the base game (for free) is a good touch and welcome support from a publisher not known for offering free updates.

9/10. Have played this German dlc love the new buildings and now can control the game speed settings plus the Terminal Stations are cool need to add to the warehouse extra spaces so more products can be held there if you are doing France try to include GB to Northern France like you have done with Ireland.  
Overall great DLC love playing it However new characters are required for the different regions
